

On July 18, 2022, U Market's software (Jaggaer) was updated to version 22.2. This version has led to a slight redesign of a few sections within U Market. See below for a quick summary of what's changed.

1. Search Page Options - Button Location Change

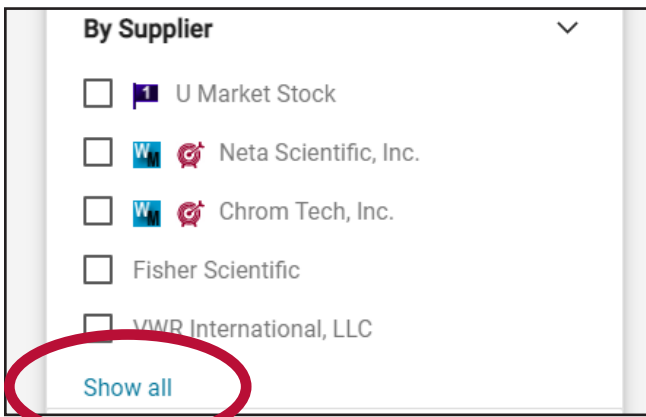

(Old button location)

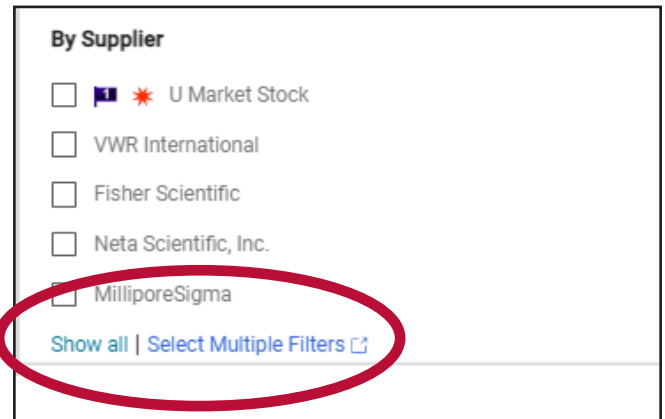

(New button location)

The buttons to change your search results (e.g. "Price Low to High," "Best Match," etc.) are now directly next to the search bar.

2. Multiple Item Filter Selection Options

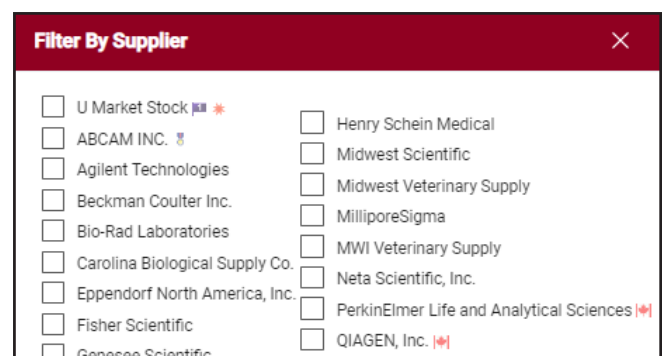

(Old view)

(New view)

The multiple filter selection on the search results page has been updated.

Now, when users click the "Select Multiple Items" option in the filter panel, a popup window displays the filter options for the section and users can click the checkbox next to the filters they want to apply.

Click "Select Multiple Filters" to display this popup window, which displays all possible selections.
